

## Electrifying our future: Our initiative for a more sustainable future and to achieve carbon neutrality by 2030

We believe we have a responsibility to all stakeholders for environmental stewardship and transparency.

Our goal is to achieve carbon neutrality by 2030. Our commitment takes a comprehensive approach and provides accountability with flexibility for innovation. We are innovating operations to reduce environmental impact by reducing emissions and waste, revolutionizing our facilities, replacing older vehicles and investing in new technologies.

We understand our role in helping to protect and preserve our planet. To achieve our goals, we are:

Investing in alternative fuels to reduce vehicle emissions

Converting our fleet as quickly as possible to zero-emission electric vehicles

Investing in our facilities, renewable energy, and energy infrastructure

"The strategy to achieve our sustainability goals shows the world how a company of our size can help lead a global industry to invest, innovate and create momentum to combat climate change. Reducing emissions and helping to build a better, brighter world is critical for the future of our business, customers, communities, and planet."

– Ranjiv Sandhu, President & CEO

Established in 1980, Star Chauffeured Services operates the largest, most diversified and newest fleet of commercial passenger vehicles in Western Canada. Each of our vehicles are chauffeured by one of our professionally trained and experienced drivers. Our vehicles are detailed and maintained after every transfer at our onsite BC Licensed Commercial Inspection facility. For over forty years, Star Chauffeured Services has been providing quality service to local and international corporate and private clientele.
